

SEVEN SOFTLIGHTS

Seven dedicated Softlights

Daylight and Tungsten:
150W, 300W, 1000W, 4x150W Tungsten
200W, 400W/575W Daylight

In comparison to a soft box attachment mounted to a Fresnel fixture, they provide double the light efficiency with no hot spots

The lamps are placed in the focal center of the soft box to produce a perfectly lit surface

Patented adjustable speed ring adapts to an amazing variety of soft boxes in seconds

The Dedoflex Octodome features a huge diffuser area, with a diameter of 150 cm (5') while being only 40,5 cm (16") deep, making it ideal for confined spaces

The diameter of the patented Dedolight speed ring may be changed by simply extending its rod receptacles

SEVEN SOFTLIGHTS

Dedolights have become a worldwide standard for focusing precision lighting instruments. Now the new range of seven dedicated Dedolight softlights add the softer side of lighting instruments for the professional image creator. The term „dedicated“ refers to the single purpose design features of these softlights where the light source is placed in the focal center of the softbox.

This provides:

- double the light output compared to a soft boxes mounted to the front of fresnel lights.
- Eliminates the hotspot typically found on conventional softboxes, supporting the desired wrap around character of a soft source

The Dedolight softlight series includes five tungsten and two daylight HMI models.

Extendable receptacles (patented) allow the use of different size softboxes on the same light - no extra speedrings needed!

Lux/fc values at a given distance from the lighthead will remain constant – regardless of the size of the softbox used.

DLH1x150S Tungsten

A 150W low voltage softlight with an inline dimmable transformer starts the range for the small video crew. The pocket size light head has patented extendable Adaptor arms for three different sizes of softboxes. This allows the videographer to adapt the size of the light emitting diffuser surface from a small eye/fill light to a broad soft source for a three person setup.

DSBOCT Octodome

The Dedoflex Octodome features a huge diffuser area, diameter 150 cm (5') producing a beautiful, wrap around, soft light. Works with both the 400/575 daylight HMI and the 1000W tungsten halogen soft light.

The dedoflex Octodome is extremely compact – only 40,5 cm (16“) deep making it ideal for confined places and tight setups.

Extendable arms: one light - three sizes

DLH1x300S Tungsten

The 300 Watt dedolight softlight works with line voltage and can be used world wide by changing the lamp to the prevailing voltage. Probably the most compact package available anywhere for the travelling videographer.

DLH4x150S Tungsten

The unique 4x150 softlight evolved from the suggestions of two famous gaffers. It can be switched from one, two, three to four lamps. Each of them being continuously dimmable, providing an unprecedented range of intensities with a maximum output comparable to a softbox used on the front of a 2 KW Fresnel but infinitely lighter and more compact.

Any color temperature from candlelight to 3400° K in four different intensities.

Can be used with small and medium dedoflex softboxes or large Photoflex or Chimera Domes.

The light output has to be seen to be believed and the light quality is absolutely stunning!
